KTHB FIX TAPING UNIT

Perfect for short tapes

Easy handling – short setup times

Whether for spot taping and taping attachments or for short wires with branches: The KTHB Fix is ideal for tapes up to 20 centimeters in length. Handling in manual operations is significantly faster than with a large taping machine. Another advantage is the extremely short non-productive time: With the KTHB Fix, the tape is automatically inserted and cut.

This high-performance manual machine is a must-have for professional wire harness production. The KTHB Fix is an easy-to-use and space-saving unit which can be screwed onto the table and is ideal for use as a stationary device at the secondary workstation.

High quality in manual feed processes

In contrast to all-manual taping, the KTHB Fix reliably produces wrinkle-free results. If tape overlapping is required, the machine guarantees a consistent pitch. The reason is the constant tension applied to the tape which guarantees superior quality in contrast to manual production.

Technical data

Adhesive tape and wire harness	
Wire harness diameter	3 – 20 mm
Adhesive tape materials	A range of automotive and industrial tapes
Tape width	9 – 19 mm
Tape roller core diameter (standard)	1.5" (optional: 1.25")
Machine data	
Pre-feed type	Manual feed
Dimensions (H/W/D)	175 × 275 × 300 mm
Weight	2.4 kg

Your benefits:

- Turnkey machine immediately ready for use.
- Time saving thanks to minimum non-productive times.
- Integrated cutter.
- Easy and intuitive handling.
