

Replacement Komax Wire Feed Belts By Bervina

- Manufactured in Europe
- Competitively priced
- UK stock – according to usage
- Different materials and hardness available
- All major Komax machines covered

Description

Bervina timing belts are moulded from thermoset polyurethane, applying centrifugal casting. All products are one piece moulded without joint, consisting of steel, kevlar, inox, polyester or fiber glass reinforcement.

We offer a large selection of tooth profiles and lengths for different applications. We design and produce tooling for new applications in house. Belts are available from lengths of 150mm – 1500mm, available hardness of the material is between 10-90 ShA. Heat resistance is between 80 – 200 °
